Soil Amendments

Professional Solutions to Enhance
Project Success.

central  fiber

Dependable. Smart. Naturally.

ABC - A liquid multi-use, combination product containing a mix of micro-nutrients, bio-stimulants & a quality wetting agent which helps with soil & mulch moisture control. Four 1 gallon jugs are included per case. Typical application rate of 4-6 quarts per acre.

Dry Gypsum - A versatile product used for improving water penetration, fertilizer effectiveness & assisting root growth. Gypsum also provides essential plant nutrition through providing calcium & sulphur, while counteracting sodium alkali soils. It is packaged in 40 Pound bags. Minimum application rate of 40 pounds per acre.

PENTA - A super penetrating material with a rooting stimulant. Designed specifically to combat compaction, this product is a terrific soil softener. It easily fights hard soils so moisture can be retained & new roots established. Four 1 gallon jugs are included per case. Minimum application rate of 4-6 quarts per acre.

RX - A liquid material designed specifically to work toward nullifying the effects of toxins in soil from overuse of herbicides, sodium buildup & other chemical problems. RX is a multi-application product with no special handling needed. It is packaged in 1 gallon jugs. Minimum application rate of 1-4 quarts per acre.

TACPAC™ GT - A 100% highly refined guar gum tackifier. Tacpac™ GT binds fiber, seed & soil particles together. It provides excellent moisture retention & erosion control during seed germination. Four 10 pound bags are included per case. Typical application rate is 20-40 pounds per acre.

VG - A growth aid product comprised of a superior enzyme complex to stimulate the microbial population in on site soil. Four 1 gallon jugs are included per case. One gallon covers four acres.

Extra Green - A concentrated dye which gives hydroseeding mulch a natural green color for a more consistent & attractive application. Extra Green is highly concentrated & comes in convenient water soluble packages. Forty packages are included per 5 pound case.

Dry Lime - A very effective product which can be used to improve soils with low PH. Because of its finely ground particles, a greater surface area is covered & it breaks down very quickly. Dry Lime can be applied through a hydroseeding machine and "shot or applied" almost anywhere, or by fertilizer-type spreaders. It is packaged in 40 pound bags. Minimum application rate of 40 pounds per acre.

Liquid Lime Plus - When compared to traditional agriculture & pelletized limestone, Liquid Lime Plus has greater strength and is more effective in creating the soil conditions needed for successful germination. It is packaged in convenient, easy to handle 2.5 gallon jugs; Two jugs are included per case. Minimum application of one jug per acre.

PolyTack - A unique blend of synthetic organic polyacrylamides resulting from years of research & development. PolyTack is a highly concentrated tackifier designed to create a highly viscous slurry. This greatly reduces the potential for time-consuming clogs. Added benefits include zero curing time & a longer lasting application due to our own SLOW-RELEASE components. Six 3 pound jugs are included per case. Minimum application rate of 3 pounds per acre.

SEEDIT - This liquid material is produced to enhance the germination of seeds. It contains materials to soften the seed coat, to provide nutrients necessary for the establishment of the new seedling & to promote the density of new roots. Four 1 gallon jugs are included per case. Minimum application rate of one quart per acre.
